PROFILE

Technical Project Manager and Full-Stack Architect with over 20 years of experience designing and delivering enterprise-grade web, mobile, and AI-powered applications. Deep expertise in building production-ready AI chatbots, voice-enabled survey platforms, cloud-based data management tools, and large-scale ERP systems using Anthropic Claude, Azure OpenAI, ChatGPT, Angular, TypeScript, .NET, Python, and Oracle PL/SQL. Proven leader who has managed teams of 196+ professionals, coordinated multi-country rollouts across India, Africa, and Southeast Asia, and consistently delivered complex, high-impact solutions across Retail, Logistics, HRMS, Financial Accounting, Production & Inventory, Service & AMC, Textile, Transportation, and ERP domains.

EXPERIENCE

SK Finance Ltd. · Mumbai

VP – Technical

Jan 2026 – Present

- › Led end-to-end development of a Customer Service App and Admin Portal powered by Anthropic Claude AI, automating routine customer queries and escalation workflows
- › Oversaw seamless integration of the AI solution with existing legacy systems, ensuring robust data pipelines and strict security protocols throughout
- › Delivered measurable improvements in operational efficiency and customer satisfaction scores through AI-driven real-time support and intelligent contextual insights

Sonata Software Ltd. · Bangalore

Digital Project Manager

Dec 2020 – Jan 2026

- › Coordinated a 196+ member cross-functional team on a Microsoft WPF to Angular migration project in the Auditing domain, managing technology, deliveries, and enhancements
- › Delivered Epicor Nucleus and Libertas projects for Prophet 21, projected to eliminate 70% of development and support overhead in the long run
- › Architected a Self-Generative Chatbot Platform using Anthropic AI, Azure OpenAI, and Python – reducing chatbot build time from weeks to minutes
- › Built a multilingual VoC & CX Survey Tool with hands-free voice input, full branding customisation, AI-driven text analysis, and automated SQL reporting (EN/JP/ZH)
- › Stack: Azure OpenAI · Anthropic AI · ChatGPT · .NET 6 · Python · Angular v16 · TypeScript · Ionic · Azure Functions · Azure Tables · Azure Blobs

Focus Prism Pvt. Ltd. · Coimbatore

Technical Lead

Oct 2019 – Nov 2020

- › Managed the Hyderabad branch team across multiple mobile and ERP projects, overseeing deliveries, bug resolution, and day-to-day technical challenges

DOMAINS

- › BFSI & FinTech
- › HRMS & Payroll
- › Logistics & Warehouse
- › Retail & Manufacturing
- › Textile & Transportation
- › Customer Experience
- › Enterprise ERP
- › Banking & Insurance

- ▶ Developed multiple mobile-based applications and a complete ERP for the food & catering industry; sustained all AWS deployments throughout COVID-19 with zero major incidents

Golden Arrow · Sudan

Acting Group IT Manager

Jun 2018 – Nov 2019

- ▶ Promoted from SQL Programmer to Acting Group IT Manager; oversaw complete IT infrastructure across 23 business verticals and multiple ERPs
- ▶ Managed ERP development, maintenance, procurement, contractor hiring, and multi-site branch support across Sudan and South Sudan

Alchemy System Pvt. Ltd. · Mumbai

Sr. Project Manager

Dec 2015 – Apr 2017

- ▶ Delivered complete Retail, Service & Maintenance ERP with POS, multi-currency, inventory, and workflow for a 10+ member team
- ▶ Implemented the system across three international locations: Tanzania, Congo, and Mumbai

Questec Consultancy · Mumbai

Team Lead

Jun 2014 – Nov 2015

- ▶ Managed 1–3 TB production databases and built reporting, scheduling, alerting, and report generation tools using SQL, SSRS, SSIS, and SSAS

Osource Global · Mumbai

Project Manager

Sep 2013 – Jun 2014

- ▶ Delivered HRMS, Payroll, and DMS solutions; implemented across multinational hotel chains including Marriott, Westin, and Four Points Swiss

BasePro · Bhiwandi, Maharashtra

Team Lead

Feb 2008 – Aug 2013

- ▶ Designed and delivered end-to-end ERP for Textile and Transportation industries with Warehouse and Logistics modules - 100+ implementations across Maharashtra

Nelito Systems Ltd. · Mumbai

Software Developer

Feb 2006 – Aug 2008

- ▶ Migrated Fincraft banking product: SQL to Oracle (4 GB schema) and VB6 frontend to VB.NET; built SLiM system for CMM Level 3 compliance

PROJECTS

1. Libertas – Cloud-Based Data Management & SQL Integration

Role: Team Lead & Developer **Stack:** .NET · SQL · Angular · Azure DevOps

Libertas is a cloud-based solution designed to enable users to create and manage SQL database tables directly from a cloud interface while facilitating highly efficient data transfers – both push and pull operations – between cloud platforms and on-premise SQL databases. The system incorporates advanced query monitoring using Extended Events in SQL, allowing users to review and track all executed SQL statements within a defined timeframe for debugging and performance optimisation. Libertas also provides secure access to cloud-hosted SQL databases that are traditionally restricted from direct end-user interaction, delivering enhanced usability, operational transparency, and robust security for authorised users.

Key Features

- Cloud-Based Table Creation & Management – users can seamlessly create, modify, and manage tables in SQL databases through the cloud interface, significantly simplifying database administration tasks for non-DBA users
- Efficient Push & Pull Data Transfers – enables smooth, controlled data exchange between cloud platforms and on-premise databases with configurable validation rules for both inbound and outbound data flow
- Extended Events Integration – integrates SQL Extended Events to allow users to monitor, review, and analyse all executed SQL queries within a specified timeframe, enabling proactive debugging, auditing, and performance tuning
- Secure Database Access – facilitates safe interaction with cloud-hosted SQL databases traditionally locked down to end users, maintaining strict security and authorisation controls throughout
- Intuitive User Interface – provides a clean, real-time interface that surfaces live data updates, reduces administrative overhead, and removes the need for direct database tool access for routine operations

Responsibilities

- Led the development team end-to-end, assigning daily tasks, tracking milestone progress, and ensuring consistent delivery against the project schedule
- Facilitated daily scrum meetings to monitor progress, resolve blockers, and maintain alignment across all workstreams
- Provided technical guidance, resolved development challenges, and coordinated cross-functional teams for monitoring capability and security standard integration
- Oversaw full integration of SQL, .NET, and Angular to ensure seamless development, testing, and production deployment of the complete solution

Outcome

- Delivered a robust cloud-based SQL management capability enabling secure, real-time data transfers and comprehensive query monitoring for business users
- Reduced administrative overhead significantly by providing a self-service interface for operations that previously required dedicated DBA involvement
- Successfully met strict security, compliance, and performance standards, improving both system performance and ease of troubleshooting across all environments

2. Self-Generative Chatbot Platform

Role: Developer, Lead & Engineer **Stack:** .NET · SQL · Azure DevOps · Azure Functions · Azure Storage · Azure OpenAI · Anthropic AI · Oracle AI · ChatGPT · Python

The Self-Generative Chatbot Platform is an intelligent automation tool designed to automatically create AI-driven, contextually aware chatbots from a wide variety of content types – including uploaded documents, training videos, audio recordings, or manually typed input. The platform eliminates the traditional complexity of chatbot creation by automating prompt engineering, knowledge base construction, and deployment end-to-end, enabling businesses to launch tailored chatbots in a fraction of conventional time. Each generated chatbot is hosted with a unique embeddable URL, allowing seamless integration into the client's existing web portals or mobile applications without additional configuration.

Key Features

- Flexible Content Upload – supports diverse content types including HR policy documents, training manuals, instructional videos, audio recordings, and manually entered text; each is processed to extract actionable knowledge for chatbot training
- AI-Powered Chatbot Creation – automatically analyses uploaded content, constructs structured knowledge bases, engineers contextual prompts, and generates a fully deployable chatbot tailored to the specific use case
- Embeddable URL Deployment – each generated chatbot is assigned a unique hosted URL, enabling effortless plug-and-play integration into any web portal or mobile application with a single link
- Dynamic Contextual Q&A – chatbots deliver precise, contextually accurate responses by referencing the uploaded knowledge base; for example, employees

querying HR policies receive answers drawn directly from the uploaded policy documents

- Multi-Content & Multi-Format Support – converts documents, videos, and audio into structured knowledge bases; voice content is transcribed, analysed, and indexed, enabling rich and accurate chatbot responses across all input formats
- Multi-AI Provider Integration – leverages Azure OpenAI, Anthropic AI, ChatGPT, and Oracle AI to deliver high-quality, reliable responses with provider flexibility and built-in redundancy

Responsibilities

- Led the design and development of the core chatbot generation algorithm, encompassing text extraction, audio transcription, video content parsing, and automated prompt engineering pipelines
- Integrated AI and NLP techniques across multiple providers to extract, structure, and frame relevant information into coherent, contextually accurate chatbot response frameworks
- Designed and built the URL generation and hosting infrastructure, enabling seamless embedding of generated chatbots across web and mobile platforms
- Collaborated with UI/UX teams to design an intuitive content upload interface and chatbot interaction dashboard for business end users
- Established a continuous testing and training pipeline using real-world data to validate response consistency, contextual accuracy, and conversational quality across all chatbot instances

Outcome

- Dramatically reduced the time required to create domain-specific chatbots from weeks of manual development to minutes of automated generation
- Enabled businesses to automate customer support, employee self-service, and internal communication with minimal manual intervention and zero custom coding
- Enhanced employee engagement by providing instant, AI-powered access to company knowledge bases, policies, FAQs, and training materials through a conversational interface

3. VoC & CX Survey Tool – Voice of Customer & Customer Experience Platform

Role: Developer, Lead & Engineer **Stack:** *Angular · .NET · SQL · Azure OpenAI · ChatGPT · Oracle AI · Anthropic AI*

The VoC & CX Survey Tool is a comprehensive, fully customisable survey platform purpose-built for Voice of Customer and Customer Experience feedback collection. Designed to integrate seamlessly with client web portals and mobile applications, the tool provides end-to-end feedback capture, AI-driven analysis, and automated reporting in a single unified platform. A key differentiator is its voice-enabled input system, allowing users to submit survey responses completely hands-free while driving, walking, running, or performing any activity, significantly increasing response rates and capturing genuine, in-the-moment feedback. The platform was designed for a global customer base with multilingual support for English, Japanese, and Chinese.

Key Features

- Voice-Enabled Hands-Free Input – users complete surveys entirely via voice; the system converts speech to text, asks follow-up questions, captures audio responses, and converts them back to structured data for AI analysis
- Complete Branding Customisation – every visual and interactive element is fully customisable including images, videos, audio prompts, colours, fonts, text boxes, and radio buttons, ensuring full alignment with each client's brand identity
- AI-Driven Analytics & Reporting – integrates Azure OpenAI, ChatGPT, Oracle AI, and Anthropic AI for intelligent text analysis, sentiment scoring, trend forecasting, and automated SQL query generation for tabular and chart-based reports
- Multilingual Support – fully supports English, Japanese, and Chinese, enabling consistent survey experiences for a global customer base across all regional deployments

- Robust Data Processing Pipeline – processes large volumes of real-time survey responses through an AI-powered pipeline that analyses, categorises, and surfaces actionable CX insights to support informed decision-making
- Seamless Integration – designed for plug-and-play integration into existing client web portals and mobile applications via configurable APIs and embeddable survey components

Responsibilities

- Led the full design and development lifecycle, ensuring a seamless user experience and precise alignment with each client's customisation and branding requirements
- Integrated the complete voice-enabled survey pipeline – text-to-speech, audio capture, speech-to-text transcription, and conversational question flow – enabling fully hands-free survey completion
- Architected the AI-powered reporting system, orchestrating integrations across Azure OpenAI, ChatGPT, Oracle AI, and Anthropic AI for analysis, forecasting, and automated report generation
- Implemented multilingual support for English, Japanese, and Chinese, ensuring consistent functionality and user experience across all language variants
- Ensured secure, scalable, and high-performance backend using .NET and SQL to reliably handle large datasets and high-frequency real-time user feedback

Outcome

- Delivered a powerful, fully customisable feedback collection platform that clients could deploy and brand independently without additional development effort
- Significantly increased survey response rates by enabling on-the-go, voice-driven submission, capturing feedback that traditional survey tools consistently miss
- Provided businesses with AI-driven, actionable CX insights and fully automated reporting, accelerating decision-making cycles and reducing manual data analysis overhead
- Successfully deployed the multilingual solution across multiple global client regions, driving widespread adoption and measurable improvements in customer experience programme effectiveness

4. Epicor Nucleus – Prophet 21 Core System Enhancement

Role: Digital Project Manager **Stack:** .NET · Angular · SQL · Azure DevOps

Actively engaged in the Epicor Nucleus project for the Prophet 21 ERP platform, contributing to enhancements and extended support for core system functionality. The primary objective was to develop and implement read-access capabilities for critical system components, enabling end users and support teams to access, query, and analyse platform data without requiring direct database privileges or DBA intervention. This initiative was projected to save 70% of cumulative development and support time over the long term by significantly reducing dependency on custom query builds and manual data extraction workflows.

Key Contributions

- Developed the Prophet 21 read-access layer, democratising data visibility for end users and support teams without compromising data integrity or requiring elevated database permissions
- Supported DBA activities and delivered an additional operational support layer through the complementary Libertas project, extending cloud-based SQL management capabilities to the Prophet 21 ecosystem
- Collaborated with cross-functional Epicor teams to ensure all enhancements aligned with Prophet 21 platform architecture, data models, and the long-term product roadmap
- Managed delivery tracking, resolved day-to-day technical challenges, and maintained thorough documentation for all platform changes and enhancements

Outcome

- Delivered a robust read-access foundation projected to reduce development and support overhead by 70% over the long run by eliminating repetitive custom query and data extraction requests

- Improved end-user and DBA efficiency by providing self-service data access through structured, secure, and intuitive tooling, reducing dependency on dedicated technical resources for routine data tasks

5. Microsoft Audit Platform – WPF to Angular Migration

Role: Digital Project Manager **Stack:** *Angular · TypeScript · .NET · Azure DevOps*

Engaged with a 196+ member distributed team on a large-scale, high-priority migration project for Microsoft, transitioning a complex enterprise Auditing platform from WPF (Windows Presentation Foundation) to a modern Angular-based web architecture. The project required meticulous coordination across multiple workstreams, technology layers, and geographically distributed teams, with a strong emphasis on maintaining functional parity, preserving data integrity, and delivering a modern browser-accessible experience without disrupting live audit operations.

Key Contributions

- Managed end-to-end technology stack transition from WPF to Angular, overseeing delivery pipelines, module completion tracking, and cross-team dependency resolution across the 196+ member team
- Led on-demand R&D initiatives, implemented new Angular features and platform enhancements, and conducted training sessions to upskill team members on modern Angular patterns and best practices
- Handled day-to-day challenges including technical blockers, cost estimations, scope changes, and preparation of technical, functional, and user manual documentation
- Delivered presentations and live demos to Microsoft stakeholders for module acceptance, ensuring each deliverable met the client's functional, performance, and quality standards
- Coordinated with QA, architecture, and DevOps teams to ensure continuous integration, automated testing, and smooth deployment of all migrated modules

Outcome

- Successfully transitioned a mission-critical enterprise auditing platform from legacy WPF architecture to a modern, scalable, browser-based Angular application
- Maintained consistent delivery velocity and quality standards across a 196+ member distributed team throughout the full migration lifecycle, with no major delivery failures
- Delivered a significantly improved user experience through the modern Angular platform, reducing client-side infrastructure dependencies and enabling remote browser-based access

6. Retail, Service & Maintenance ERP – Alchemy System Pvt. Ltd.

Role: Sr. Project Manager **Stack:** *Magic XPA · C#.NET · MSSQL*

Led the end-to-end development and international deployment of a complete ERP system for the retail, service, and maintenance domain. The system was designed to manage the full operational lifecycle – from point-of-sale transactions and inventory control to workflow automation and multi-currency financial management. The project required careful management of a 10+ member team alongside complex multi-country deployment logistics across Tanzania, Congo, and Mumbai.

Key Features

- Point of Sale (POS) – feature-rich POS module supporting multi-currency transactions, discount management, invoice generation, and receipt printing for retail operations
- Multi-Currency Financial Management – full support for multiple currencies with real-time exchange rate handling, enabling accurate financial reporting across international locations
- Workflow Automation – configurable workflow engine managing service requests, job assignments, technician scheduling, and maintenance order tracking across the service domain

- Inventory Management – comprehensive stock control covering purchase order management, warehouse transfers, stock tracking, and automated reorder alerts
- Multi-Location Deployment – designed for geographically dispersed deployments with centralised reporting and local operational autonomy at each site

Responsibilities

- Gathered and validated requirements from stakeholders across all three deployment locations, translating business needs into detailed functional and technical specifications
- Led the 10+ member development team through design, development, UAT, and go-live phases while maintaining alignment with project timelines and client expectations
- Managed international deployment logistics, data migration, user training, and post-go-live support across Tanzania, Congo, and Mumbai simultaneously

Outcome

- Successfully delivered and implemented a fully functional retail ERP across three international locations, each with localised configurations and multi-currency support
- Streamlined retail, service, and maintenance operations for the client, reducing manual processes and improving operational visibility and financial accuracy across all sites

7. HRMS, Payroll & Document Management System – Osource Global

Role: Project Manager **Stack:** .NET · SQL · Oracle PL/SQL

Developed and deployed a comprehensive enterprise suite comprising a Human Resource Management System (HRMS), a full-featured Payroll Processing System, and a Document Management System (DMS) with dedicated mobile access. The HRMS and Payroll systems were successfully implemented across multiple multinational hotel brands, while the DMS provided structured, mobile-accessible document workflows for enterprise clients. A standalone Core ERP system was also developed and delivered to a multinational client within the same engagement period.

Key Features

- HRMS – complete employee lifecycle management including onboarding, attendance, leave management, performance tracking, and offboarding workflows with full audit trail
- Payroll Processing – multi-entity, multi-currency payroll engine with statutory compliance, payslip generation, tax computation, and direct integration with the HRMS employee data layer
- Document Management System (DMS) – centralised document repository with version control, role-based access permissions, approval workflows, and full-text search capabilities
- Mobile Application for DMS – dedicated mobile app providing on-the-go document access, upload, and approval capabilities for managers and field-based employees
- Core ERP – standalone enterprise resource planning system covering financial accounting, procurement, and operational management delivered to a multinational client

Responsibilities

- Led development across all three major modules – HRMS, Payroll, and DMS – ensuring full integration between systems and alignment with each client's operational processes and compliance requirements
- Managed HRMS and Payroll implementations across hotel properties including Westin, Four Points, Marriott Swiss, and additional international brands
- Developed the mobile DMS application to extend document management capabilities to mobile and field-based workforces

Outcome

- Successfully implemented HRMS and Payroll systems across internationally recognised hotel chains, standardising HR and payroll operations across multiple properties and regions
- Delivered a robust DMS with mobile access, improving document governance, approval cycle times, and remote accessibility for distributed enterprise teams

8. Textile & Transportation ERP – BasePro

Role: Team Lead **Stack:** VB.NET · SQL · Oracle PL/SQL · VB6

Designed, developed, and delivered end-to-end ERP systems for the Textile and Transportation industries – two operationally distinct domains each requiring bespoke business logic, industry-specific workflows, and specialised reporting structures. Warehouse Management and Logistics Management were delivered as tightly integrated supporting modules, providing clients with a comprehensive, unified operational platform. Over a five-year engagement, more than 100 successful implementations were completed across diverse locations throughout Maharashtra, serving a broad base of SME clients in both industries.

Key Features – Textile ERP

- Production Planning & Control – yarn and fabric production planning, loom and machine scheduling, and production order management with real-time status tracking and output recording
- Inventory & Stock Management – grey fabric, processed fabric, and yarn stock management with lot tracking, quality grading, and wastage recording for end-to-end material visibility
- Sales & Dispatch Management – sales order management, dispatch scheduling, delivery note generation, and customer billing with tax compliance and outstanding tracking
- Purchase & Supplier Management – full purchase order lifecycle, supplier management, goods receipt, and three-way invoice matching for procurement control

Key Features – Transportation ERP

- Trip & Route Management – trip planning, route optimisation, driver assignment, and vehicle scheduling with real-time trip status updates and delivery confirmation
- Vehicle Fleet Management – vehicle registration, maintenance scheduling, fitness certificate tracking, insurance renewals, and fuel consumption monitoring for full fleet oversight
- Freight Billing & Payments – automated freight calculation, consignment billing, payment tracking, and driver and transporter settlement management
- Warehouse & Logistics Integration – seamless integration with inbound and outbound warehouse operations including goods receipt, storage allocation, and dispatch coordination

Responsibilities

- Led the full development lifecycle for both ERP systems – from requirements gathering and system design through development, testing, client training, and post-implementation support
- Managed all 100+ implementation projects across Maharashtra, coordinating site visits, data migration, user training, and go-live support for each client individually
- Provided ongoing enhancements, customisations, and bug fixes based on client feedback, continuously evolving both systems to meet changing business and regulatory requirements

Outcome

- Successfully delivered 100+ ERP implementations across Maharashtra, establishing BasePro's platforms as trusted operational systems for SME clients in the textile and transport sectors
 - Enabled clients to replace fragmented manual processes and legacy tools with an integrated digital platform, significantly improving operational efficiency, data accuracy, and business visibility
-

9. Fincraft Banking Platform Migration – Nelito Systems Ltd.

Role: Software Developer **Stack:** VB6 · VB.NET · SQL · Oracle PL/SQL · .NET Framework

Executed a comprehensive technical migration of the Fincraft core banking product – one of Nelito Systems' flagship platforms – transitioning the backend database from SQL Server to Oracle and modernising the client frontend from VB6 to VB.NET. The migration involved a 4 GB production database schema, requiring meticulous data mapping, type transformation, stored procedure conversion, and end-to-end validation to ensure complete data integrity and zero loss across the full transition. Concurrently, developed the Software Life Cycle Management System (SLiM) to formalise and automate SDLC processes in direct support of the organisation's CMM Level 3 certification.

Key Contributions

- Executed end-to-end migration of the Fincraft backend from SQL Server to Oracle – involving schema redesign, data type mapping, stored procedure conversion, and comprehensive data integrity validation across a 4 GB production schema
- Modernised the Fincraft frontend from VB6 to VB.NET, improving code maintainability, user interface responsiveness, and compatibility with modern Windows environments
- Designed and developed SLiM to systematise SDLC activities, automate workflow tracking, and generate compliance artefacts directly supporting CMM Level 3 certification processes
- Conducted comprehensive post-migration testing including functional validation, performance benchmarking, and regression testing to confirm full production readiness of the migrated platform
- Documented all migration procedures, data mappings, and system changes to support knowledge transfer, long-term maintainability, and regulatory audit requirements

Outcome

- Delivered a fully migrated, production-ready Fincraft banking platform on the Oracle stack with zero data loss, validated through rigorous end-to-end functional and integrity testing
- Modernised frontend significantly improved user experience, development maintainability, and compatibility with contemporary operating environments
- SLiM system directly supported the organisation's successful CMM Level 3 certification by providing structured, auditable lifecycle management and process compliance tooling
